

IIT Mandi launches integrated dual degree programme in bio-engineering

STATESMAN NEWS SERVICE

SHIMLA, 3 JUNE

The Indian Institute of Technology (IIT) Mandi has launched a BTech - MTech Integrated dual Degree Programme in Bio-engineering from the academic session 2019-20.

This is a first-of-its-kind broad-based programme that

allows students to understand the biological world and specialise in areas such as Bio-medical Engineering, Agro-Technology, Environmental Science and Engineering or Computational Bioengineering.

It aims at offering plethora of problem-solving opportunities. Ranging from sensing of

data from the biological world to actuation through prosthetics, from computational models to understand the biological world to machine learning techniques for diagnosis, this programme would cover Bioengineering from a more generalised perspective without getting limited to only Bio-medical Engineering.
